

# SCHEMATIQ

Think Beyond

Excel is *the* ubiquitous business modelling tool in most organisations.

### What if it could be *Faster*?

Complex, repetitive calculations and masses of VBA really slow Excel down

### What if it could be *Better Governed*?

Multiple sources of input, repetitive formulae and desk top installation make Excel a difficult to control... but still brilliant platform.

### What if it could be *Infinitely Scalable*?

Excel data row and memory limits really constrain business models

### What if it could be *Connected and Shared* inter and intra enterprise?

Excel is a desktop tool, with limited connectivity, no API capability, no history or version control

Are your Excel assets holding  
**your company back?**

# Schematiq clients transact \$bns/annum of business on our platform

## Entain Group

achieved over **\$25m** of cost savings and over **\$4m** new business with the Schematiq platform across the group's global sport betting brands

**Hiscox** save \$millions/annum by eliminating their Python modelling development teams by using the Schematiq platform

**Uniper** gained control of their Excel estate avoiding \$millions in transformation costs using the Schematiq Platform

**Hiscox** reduced the time for the Underwriting quote process from 20 minutes to milliseconds using Schematiq APIs

A black and white photograph of a woman with glasses and her hair in a bun, smiling while working at a computer. She is wearing a light-colored blazer over a dark and light striped sweater. The background is a blurred office environment with other people working.

A new way of working...  
without a totally new  
learning curve

**SCHEMATIQ**  
Think Beyond

# What Does Schematiq Do?

# What Does Schematiq Do?

Turn logic built in spreadsheets directly into **powerful cloud-running API functions**

**Integrate existing processes** into enterprise data models, to increase control and automate

Spreadsheets **continue to be developed in Excel** supplemented by Schematiq Workbench

# What Does Schematiq Deliver?

## Control

### Source Control, Enable Dev Ops in EUC

- Source Control, Share, Merge and release changes
- Enforce Standards
- Regression Testing

### Benefits

- Know who ran what when with which data set
- Clear view of dependency between users and workbooks across your estate
- Ensure sheets are not broken by changes

## Scale

### Platform Calculation Scaling and Data Access

- Parallelise Spreadsheet Calculations
- Reliable Execution (Batch) or realtime
- Control access to business-critical data sources by caching/throttling

### Benefits

- Results available much quicker
- Results delivered outside work hours
- Controlled access to Enterprise data sources

# What Does Schematiq Deliver?

## Share

### Gateway & API Access

- Generate API's directly from existing spreadsheets
- Connect Excel Models to Tableau/Qlik/Power BI
- Expose sheets as web applications or plug into enterprise systems

### Benefits

- Models run on demand in milliseconds
- Use the best tools to analyse your data
- Improved time to market for model changes with Business driven release cycle

## Optimise

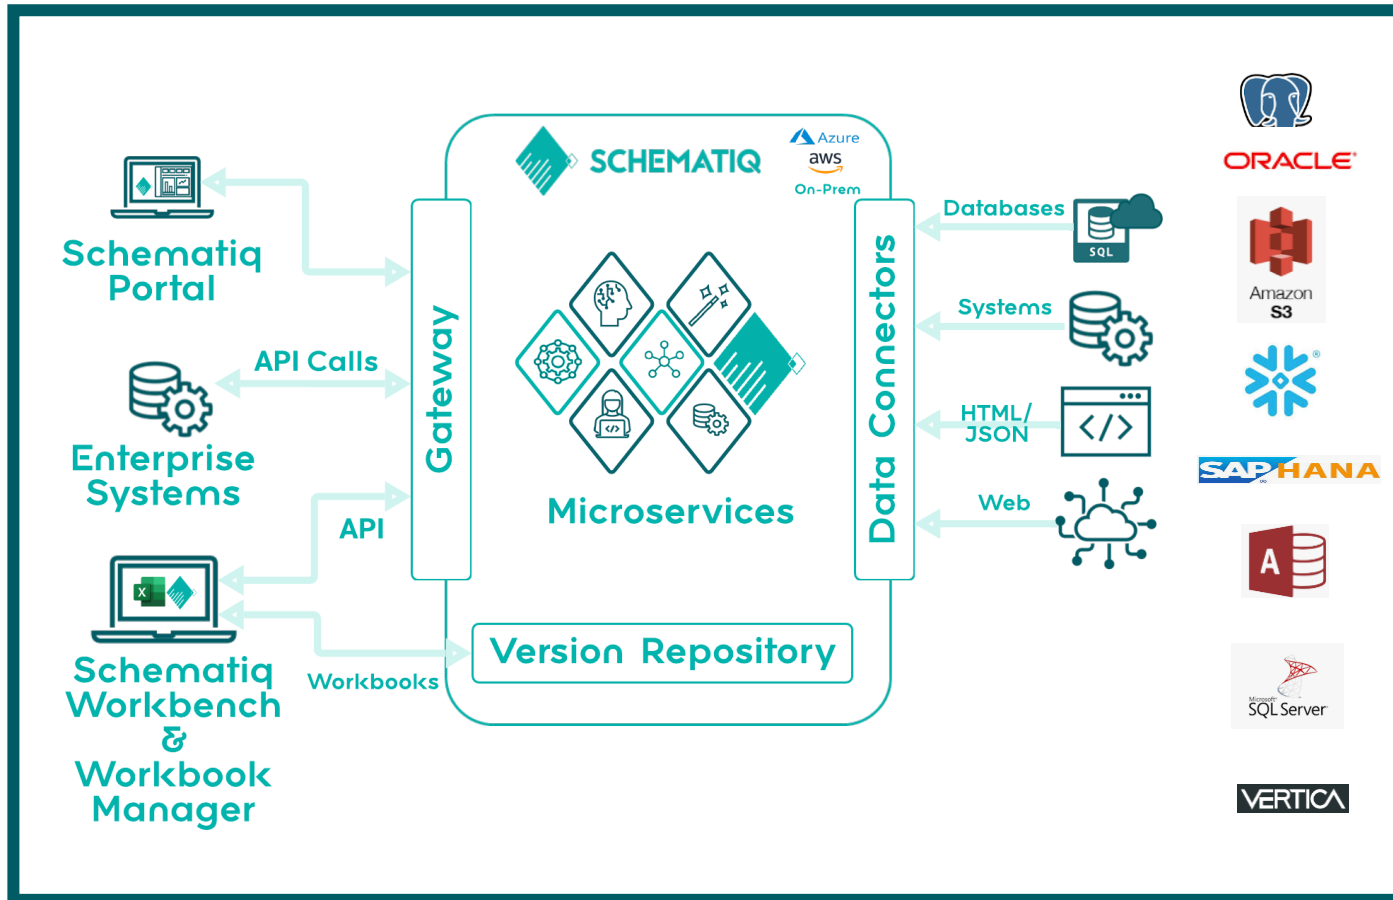

### Workbench: Excel Add-in & Local Service

- Advanced Data Processing Functions
- Data Links – Connect, move and simplify
- Templates – Refactor & Reuse Logic
- Advanced Visualisation – Data & Errors.

### Benefits

- Connect to any data source without hundreds of lines of VBA
- Share and reuse functions in a controlled manner
- Eliminate the main operational risks and constraints of Excel
- Small cultural change as staff continue to use Excel

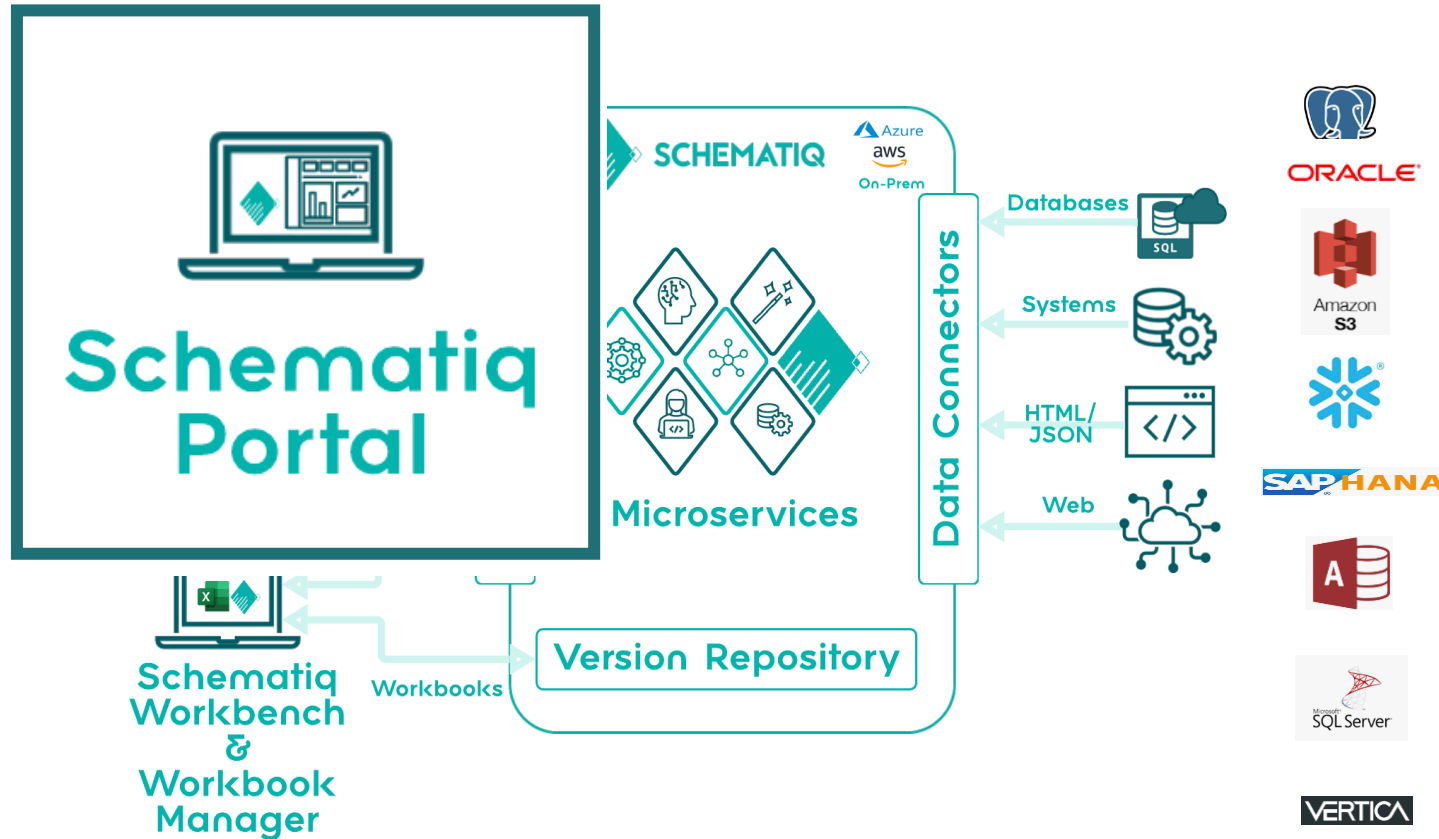

# Schematiq Platform High Level Architecture

**Schematiq Enterprise Platform;** A microservices based application platform designed to bring control, scalability, and performance, to Excel based business models; without the enormous expense of recoding or re-platforming. It delivers:

- Massively scalable running of Schematiq Engines Excel presenting workbooks as APIs
- Scheduling of workbooks to run individually or as part of a process
- Access to all an organisation's data.
- Complete control of the governance of Schematiq based Excel estate

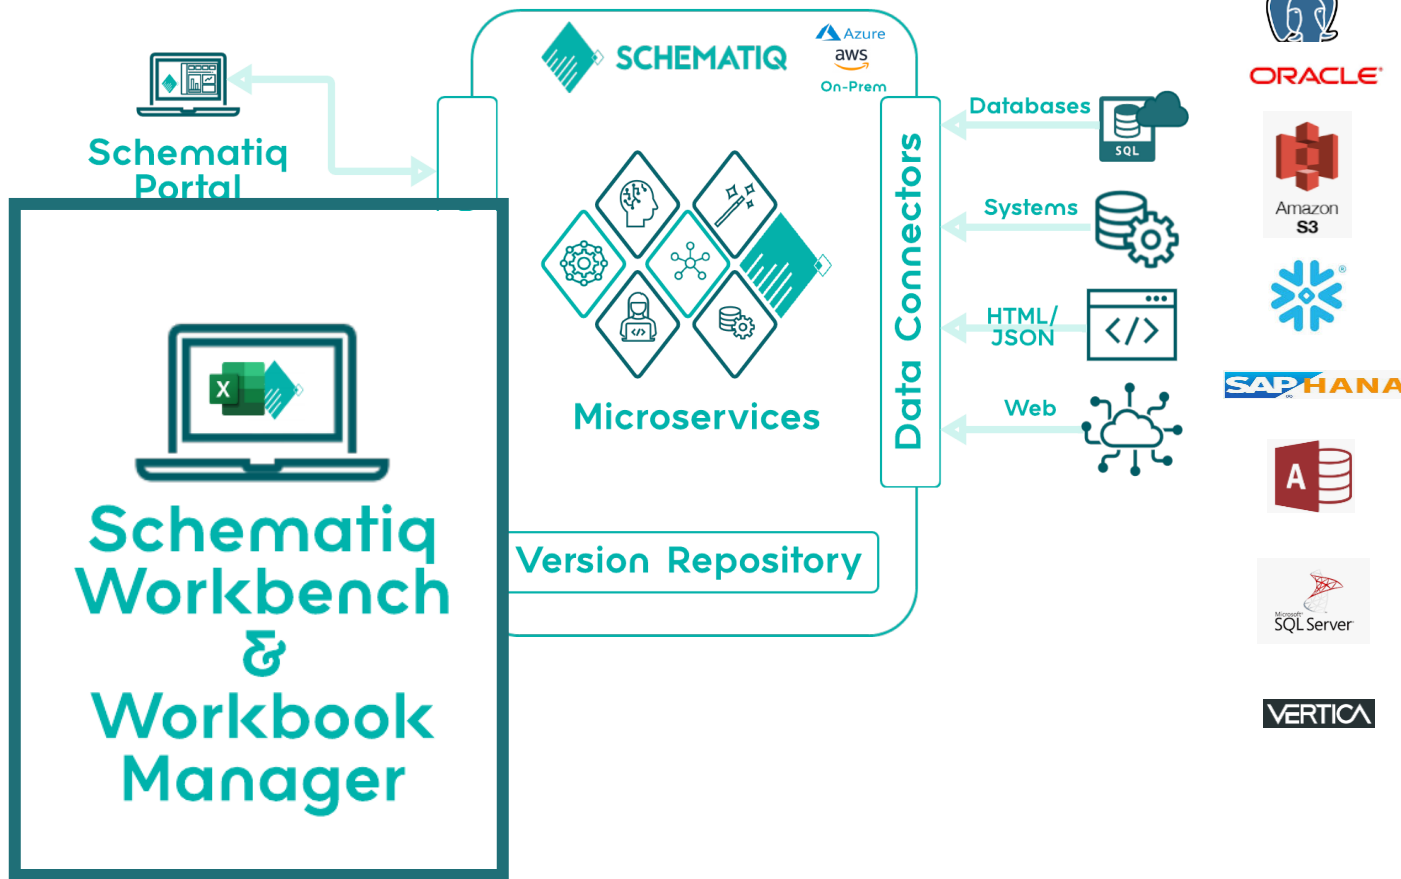

# Schematiq High Level Architecture – Schematiq Portal

**Schematiq Portal** is a cloud based component that is focused on the control and governance of the Schematiq platform. Using the platform-based microservices, it allows users to configure:

- Hierarchical project structure for Schematiq projects
- Governance on which users or groups who have access to view run or change workbooks
- Scheduling the running of spreadsheets Defining APIs on Excel workbooks or functions and permissions for those APIs.

# Schematiq High Level Architecture – Schematiq Workbench & Workbook manager

***Schematiq Workbench*** is a process that runs alongside Excel on a user's desktop which takes away all the heavy lifting from the Excel process **allowing Excel to operate without data range or memory constraints.**

It introduces:

- VBA free access to most databases
- Tables of millions of rows in a single cell, and table based calculations
- Encapsulation of functions.
- Efficient date functions

***Schematiq Workbook Manager*** provides easy-to-use access to industry-standard version control and a testing framework for Workbooks and functions

Should we stifle  
innovation or enable it?

# Key Schematiq clients

FTSE 100 company Entain Group have chosen Schematiq as a strategic tech partner to help automate core functions across the group brands and business including trading, finance, resourcing and HR

**Schematiq** provides German energy company Uniper with a flexible solution to model complex trades in their gas trading portfolio that runs daily as part of their valuation and P&L processes

**UK based Gazprom M&T** have partnered with Schematiq for several years to support many complex finance processes in their B2B gas supply business including reconciliations and billing processes.

**Hiscox** use Schematiq to integrate and automate, complex actuarial and underwriting Excel models into their online broking systems. Saving \$m per annum and enabling rapid time to market

**CCLA** chose Schematiq as their strategic platform to move their money-market trading operations away from spreadsheets and bring a step change in performance and control.

Swiss energy company **Alpiq** are adopting Schematiq to control and scale Excel spreadsheets across their enterprise. Initial use-cases have focused on their 24/365 European energy arbitrage business worth \$1bn/annum

# Case Studies – Global Sports Betting

## Sports book Automation

### The Problem

- Entain Group were looking to standardize their technology approach to running sports betting books
- The company was expanding rapidly and integrating new brands every quarter
- They are heavy users of Excel and wanted a solution that retained agility but with greater control

### Delivery Differentiators

- Schematiq allowed Excel models to be turned into APIs and integrated with core Entain systems
- The Schematiq data links allowed easy integration of new data sources
- Little retraining as the sports book traders were Excel users.
- Rapid delivery timelines

### Our Solution

- We help build a bespoke model for market data integration
- Workbook across the business were converted and integrated with Schematiq APIs
- Schematiq governance framework ensures robust control

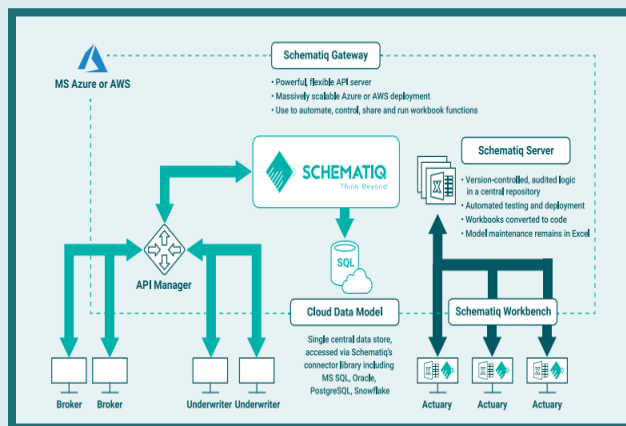

### Result

- Platform is rolled out across BWIN, Labrokes, Coral & BetMGM
- Over 300 users groupwide
- Automation facilitates agile business expansion
- New markets e.g. Cricket100 created in weeks
- Entain Group estimate over \$25m of cost savings and over \$4m new business with the Schematiq platform

# Case Studies – London Markets Insurance

## Quote and Bind automation

## The Problem

- Projects to rewrite pricing models in code had failed to deliver.
- Quoting was completely manual, limiting the expansion of business
- Catastrophe models were slow to run with the Integration of new datasets time consuming

## Delivery Differentiators

- Schematiq allowed Excel models to be turned into APIs and integrated with Quote systems
- The Schematiq data links allowed easy integration of new data sources
- Little retraining as the Underwriters and actuaries were Excel users.
- Rapid delivery timelines

## Our Solution

- Models were ported to the Schematiq Platform in the cloud and exposed via APIs.
- APIs were called directly by the online Broking systems.
- Model changes are managed by the Pricing actuaries not IT
- Schematiq governance framework ensures robust control

## Result

- First model was automated in 6 weeks of contract signature
- Quotes can be produced in milliseconds
- Automation allowed for business expansion
- Time to market for model changes was days rather than months for code-based models.
- Hiscox save millions by eliminating a python modelling team

# Case Studies – Commodity Trading

## Portfolio Optimisation Workbench

The screenshot shows an Excel spreadsheet with a title bar that reads "Power Plant - Deal Entry Template". The spreadsheet has columns labeled C through J. In the C4 cell, there is a dropdown menu with the following options: "Endur Data", "Events", "HolCalendar", and "Premiums". To the right of this menu, there are two more dropdown menus: "Trades Out" and "Events Out". Below these menus, there is a table with the following data:

B/S	P/C	Strike	CCY	Cap	UoM	Per
Buy	Put	10	EUR	100	MWh	M
Sell	Call	9.5	EUR	50	MWh	M

### The Problem

- A legacy analytics models had fallen out of favour, and been tactically replaced by more flexible Excel and VBA spreadsheets.
- However, those sheets lacked any data control, version management and presented a large operational risk.
- A new optimisation tool was being developed, but costs had spiralled trying to recreate the flexibility and transparency of Excel

### Our Solution

- With Schematiq, we were able to use Excel as an interface but leverage quant models as the back end and connect directly to trading and market data systems.
- Further scenario analysis could then be completed, scaled on the cloud and seamlessly integrate multiple users inputs and assumptions.

### Delivery Differentiators

- Schematiq removes all data limitations within Excel allowing you to build fast performing scalable applications.
- Asset Manager is able to version control all sheets in workflow, allowing a Dev-Ops approach to developing, testing and rolling-out the core functionality.

### Result

- Using Schematiq as the Workbench to access data and models saved months of custom interface design, and allowed a truly agile approach to developing the new models
- User adoption increased as flexibility of model allowed better insight into model behaviour and allowed easy addition of new features

## Case Studies – Gas Trading & Utilities

## Settlement & Reconciliation Process Improvement

[illegible]

## The Problem

- Legacy systems that were no longer fit-for-purpose had generated complex, time-consuming Excel-based processes to fill the gap.
- Business unable to scale due to overhead and risk of managing manual processes.
- Needed value delivering quickly to relive over-stretched resources and increasing amounts of data

## Delivery Differentiators

- Schematic Workbench allows incremental improvements to existing processes, meaning improvements can be made in days not months.
- Transform Spreadsheets to enterprise-quality applications without needing migration to new system/solution
- Without the need for complete re-platforming user adoption improves and delivery risk reduces

## Our Solution

- Use Schematiq to remove data limitations and leverage powerful data blending and validation tools to deliver new processes in weeks.
- Build a library of common templates that can be used in multiple processes across business, removing repeated work.

## Result

- Automation of Portfolio reconciliation process reduced time needed from 3-4 days to 1-2 hours – equivalent to around 40 w.d./ annum , implemented in under a week.
- Project served as template for further improvement initiatives using Schematiq which within 6 months saved a further 100 w.d./ per annum
